

Project Software Requirements Overview

Project Title: High-Precision AI Video Generator Platform

Core Objective: The primary goal of this application is to deliver a high-performance, glitch-free AI video generation tool using Google Veo 3.1. The software features a dual-input architecture that accepts both a detailed text prompt and a reference image to guarantee maximum accuracy and consistency with character appearance and style. The system supports multi-threaded batch processing, enabling users to generate up to 5 videos simultaneously with no daily or total limits. Generated outputs maintain a fixed duration of 8 seconds and allow users to toggle between 720p and 1080p resolution settings. Furthermore, the application integrates built-in negative prompting and optimized frame rendering to actively filter out flickering, distortion, and visual artifacts, ensuring rapid and ultra-reliable video creation.

Key Specifications Included:

Input Types: Text Prompt + Reference Image (Image-to-Video).

Batch Generation: Generates 5 videos at a time.

Video Duration: Fixed 8 seconds.

Resolutions: 720p and 1080p support.

Usage Limit: Unlimited generations.

Quality Standard: Glitch-free, high-accuracy output with artifact filtering.
